

Burglar alarm speaker wire horn

ES-626

How does a security siren work?

Siren alarm systems work by generating a loud, piercing siren sound when they're triggered by intruders in and around your home. When they're set off, some siren alarms also emit flashing lights to attract even more attention to your property.

Specifications

S4A Model No.	ES-626	Sound pressure	When connected to 12V voltage, it can reach 120dB at 30CM
